

HEALTH SYSTEMS IN THE COMMUNITY CONTEXT (HSCC)

The Health Systems in the Community Context (HSCC) concentration is designed to prepare students to lead at the nexus of health care and public health. Students will learn to communicate health information effectively, advocate for data-driven healthcare and health systems, and utilize data to develop community-responsive interventions that target the underlying factors influencing community health across the continuum of public health and healthcare. Students will learn to lead to create equitable health outcomes, use data to drive impactful research and interventions, and collaborate to effect change in health systems toward effective healthcare access and delivery in the community context.
